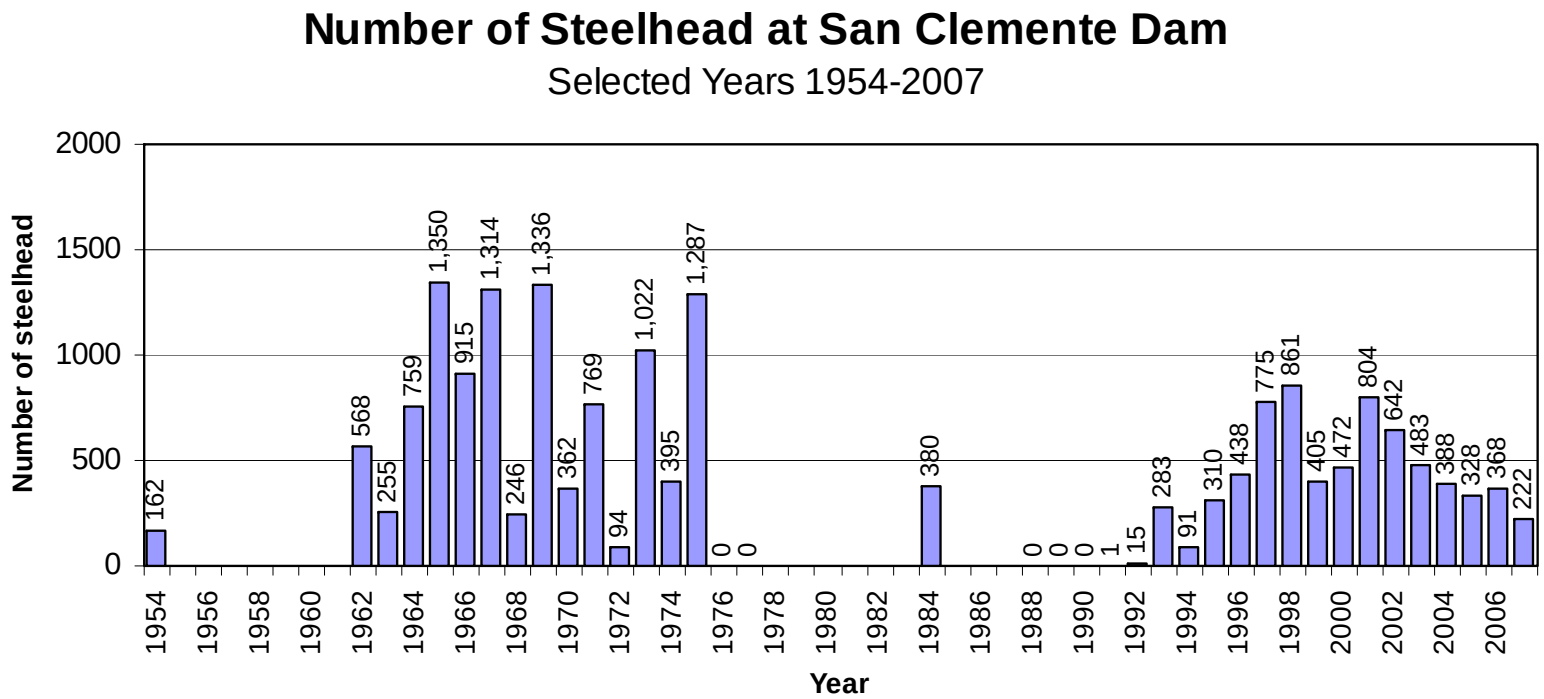
Figure IX-5



NOTE: 2007 counts are incomplete, low flows caused district to pull counter on April 2, video was caught of migrating fish after this time and needs to be evaluated before count is finalized.
Counts are based on Snider (1983), Dettman (1986), CDFG and MPWMD files. The 1962-73 and 1991-93 counts at San Clemente Dam are the sum of daily numbers of fish observed by shutting off the flow in the fish ladder. The 1974, 1975, 1984, and 1994-06 data are complete counts registered on an automatic counter.
