Monterey Peninsula Water Management District
Water Distribution System Report Notes
October 1, 2002 – September 30, 2003

1. Information shown is as provided by system owners and operators unless otherwise noted.
2. Methods for reporting production are either Land Use (LU) or Water Meter (WM).
3. The source areas are as follows:
 - AS1 – Upper Carmel Valley – San Clemente Dam to Esquiline Bridge
 - AS2 – Mid Carmel Valley – Esquiline Bridge to Narrows
 - AS3 – Lower Carmel Valley – Narrow to Via Mallorca Bridge
 - AS4 – Via Mallorca Bridge to Lagoon
 - SCB – Seaside Coastal Basin
 - CAC – Cachagua
 - CVU – Carmel Valley Upland
 - LSS – Laguna Seca Subarea
 - MIS – Peninsula, Carmel Highlands and San Jose Creek areas
4. Cal-Am production includes 287.7 AF from San Clemente Reservoir, 3,507.0 AF from Seaside wells, and 11,076.0 AF from Carmel Valley wells.
5. Cal-Am delivery includes 12,909.76 AF for customers in its main system, 13.05 AF for Cal-Am customers in the former Rancho Fiesta Mutual area, and 157.27 AF for Cal-Am customers in the former Water West area. Because water is delivered to the Rancho Fiesta area, but none has been produced there for over a decade, the 22 active connections there are now assigned to the Cal-Am total. The Cal-Am delivery value also includes 63.9 AF of water that was produced but used for backwash purposes, and 167.53 AF that was delivered to the Seaside injection well. The amount of water that was produced for irrigation around the Carmel Valley wells and the amount of non-revenue water produced during Water Year 2003 are not available at this time.
6. N.A. refers to data that are not available.
7. Animal Farm, Condon and Hyles Water Distribution Systems were added during Water Year (WY) 2003. Abadir, Booth and Hidden Mesa were added in WY 2002.
8. All water produced from Canada Woods Water Distribution System was for non-potable uses, i.e., temporary construction uses and irrigation.
9. The names of Cachagua Road #1 and #2 were switched in Reporting Year 1999 to agree with records of the Monterey County Department of Health. Older District records have the names of these two systems reversed.
10. Production and delivery figures in italics were adjusted to account for reports that did not include data for the entire Water Year, or reported data for a longer period.
11. Bishop Unit is operated by Cal-Am and was acquired July 1999.
12. Rancho Fiesta is operated by Cal-Am. The delivered amount (13.05 AF) was produced by the main Cal-Am system, so that amount has been accounted for in Cal-Am system deliveries. The source of production was AS1 – AS4.
13. Hidden Hills was formerly referred to as Carmel Valley Mutual and was annexed to Cal-Am in 1993.
14. The Ryan Ranch Unit is operated by Cal-Am. In Water Year 2003, because of production problems in the Ryan Ranch Unit, 25.8 AF were supplied from Cal-Am's main system to the Ryan Ranch Unit. This supplemental supply was in addition to the 69.34 AF produced by the wells in the Ryan Ranch Unit. Therefore, total production for the Ryan Ranch Unit in WY 2003 was 95.14 AF. Of this total, 65.10 AF was reported as delivered. The difference, 30.04 AF or 32% was unaccounted for.
15. Production from the Monterra desalination plant was 35.97 AF. Metered deliveries totaled 34.01 AF. Unaccounted consumption from the desalination plant was 1.96 AF, or about 5% of production.
