Notes:

- Water Year (WY) 2008 began on October 1, 2007 and will end on September 30, 2008.
- Values in shaded areas represent current month.
- Actual WY 2008-to-date production of 8,429 AF includes 60 AF that were produced in the LCV (Feb.-Mar. 2008), and injected into the Seaside Basin.
- Anticipated streamflow, evaporation and storage values for January through March 2008 were not projected due to the critical hydrologic conditions that existed through December 2007.
