**REF: Monterey Bay Shores Ecoresort Water Distribution Permit Application  
APN 011-501-014 – Approve the Permit on February 26th!**

Dear Chair Markey and Board Members:

Your actions on your January 29<sup>th</sup> Board meeting were wrong. You squandered an opportunity to show leadership on how our water resources can be conserved and managed by following the leadership of the Ecoresort and approving their permit. I would like to express my strong support for the District approving the Water Distribution Permit for the Monterey Bay Shores Ecoresort. I am very supportive of the "ecoresort" water savings initiatives that it demonstrates, something we as residents of the Monterey Peninsula need. This project will lead the way by demonstrating that by saving water, we can manage effectively our precious water resources. Their gray water recycling system will become Monterey County's first project specific system that saves water. It has been approved by the County already. This can serve as a *model* for others to retro-fit or install new graywater systems. Their other water saving systems including stormwater management, harvesting and collecting rainwater and green roofs, are equally impressive. Please take the appropriate steps on February 26<sup>th</sup> and **approve** the permit.

Respectfully,

  
Alexander J. Kennard

**REF: Monterey Bay Shores Ecoresort Water Distribution Permit  
Application #20080915MBS-L4, APN 011-501-014**

Dear Chair and Members of the Board:

I am somewhat surprised by the actions of the Board in the previous Board meeting of January 29, 2009, when it failed to seize on the opportunity and approve the Water Distribution Permit for the Monterey Bay Shores Ecoresort. It was apparent from the discussions, that water source is not an issue. The Ecoresort has water for the project which was confirmed in the Adjudication of the Seaside Basin. Rather, the discussion shifted to whether Cal-Am's diversions in the Carmel River have any impact on the pumping of the Seaside Basin. It would appear from the material presented, that this is also a non-issue, and hopefully the SWRCB will confirm that in writing. On the point related to Sand City's desalinization plant, it appears that this Board already previously, in December 2007, excluded that as an option because the Ecoresort has its own water. One point that was brought up was that "maybe" more CEQA environmental work is required because of Order 95-10 or potential cease and desist order, something your own legal counsel advises you is a "very speculative matter". Extensive EIR work has been done over the years and no impacts were found. The owner of the project decided to move pumping inland to help the community and the environment, and now you are trying to penalize him for that because Cal-Am is the pumper of his water? Where is the logic? That is simply wrong! You can do better than that.

Let's give credit where it's due, and *acknowledge* all the benefits this Ecoresort brings to our water saving systems and water management plans, not to mention the community. We have a lot to learn from their innovation and design systems, all of which would help all of us in the Monterey Peninsula conserve water as a precious resource. I ask that you show your leadership role as elected Board to do the right thing now, act upon an opportunity, and **approve** the permit in front of you without further delays.

Sincerely,

Alexander J. Lumbertz

I am somewhat surprised by the actions of the Board in the previous Board meeting of January 29, 2009, when it failed to seize on the opportunity and approve the Water Distribution Permit for the Monterey Bay Shores Ecoresort. It was apparent from the discussions, that water source is not an issue. The Ecoresort has water for the project which was confirmed in the Adjudication of the Seaside Basin. Rather, the discussion shifted to whether Cal-Am's diversions in the Carmel River have any impact on the pumping of the Seaside Basin. It would appear from the material presented, that this is also a non-issue, and hopefully the SWRCB will confirm that in writing. On the point related to Sand City's desalinization plant, it appears that this Board already previously, in December 2007, excluded that as an option because the Ecoresort has its own water. One point that was brought up was that "maybe" more CEQA environmental work is required because of Order 95-10 or potential cease and desist order, something your own legal counsel advises you is a "very speculative matter". Extensive EIR work has been done over the years and no impacts were found. The owner of the project decided to move pumping inland to help the community and the environment, and now you are trying to penalize him for that because Cal-Am is the pumper of his water? Where is the logic? That is simply wrong! You can do better than that.

Let's give credit where it's due, and *acknowledge* all the benefits this Ecoresort brings to our water saving systems and water management plans, not to mention the community. We have a lot to learn from their innovation and design systems, all of which would help all of us in the Monterey Peninsula conserve water as a precious resource. I ask that you show your leadership role as elected Board to do the right thing now, act upon an opportunity, and **approve** the permit in front of you without further delays.

Sincerely,

February 9th, 2009

**REF: Monterey Bay Shores Ecoresort Water Distribution Permit Application  
APN 011-501-014 – Approve the Permit on February 26th!**

Dear Chair Markey and Board Members:

Your actions on your January 29<sup>th</sup> Board meeting were wrong. You squandered an opportunity to show leadership on how our water resources can be conserved and managed by following the leadership of the Ecoresort and approving their permit. I would like to express my strong support for the District approving the Water Distribution Permit for the Monterey Bay Shores Ecoresort. I am very supportive of the "ecoresort" water savings initiatives that it demonstrates, something we as residents of the Monterey Peninsula need. This project will lead the way by demonstrating that by saving water, we can manage effectively our precious water resources. Their gray water recycling system will become Monterey County's first project specific system that saves water. It has been approved by the County already. This can serve as a *model* for others to retro-fit or install new graywater systems. Their other water saving systems including stormwater management, harvesting and collecting rainwater and green roofs, are equally impressive. Please take the appropriate steps on February 26<sup>th</sup> and **approve** the permit.

Respectfully,

A handwritten signature in black ink, appearing to be a stylized name, possibly "O. M.", written in a cursive style.
