

EXHIBIT 13-B

**California American Water Laguna Seca Subarea Distribution Systems
Quarterly Water Supply Strategy and Budget: October 2014 - December 2014**

Proposed Production Targets by Source and Projected Use in Acre-Feet

SOURCE/USE	MONTH			YEAR-TO-DATE		
	Oct-14	Nov-14	Dec-14	Oct-13 - Aug-14	% of YTD	% of Annual Budget
<u>Source</u>						
Seaside Groundwater Basin						
Laguna Seca Subarea	5	3	3	330	253.8%	224.5%
Other	0	0	0			
<u>Use</u>						
Customer Service	5	3	3			
Total	5	3	3	330		

Notes:

1. The annual budget period corresponds to the Water Year, which begins on October 1 and ends on September 30 of the following Calendar Year.
2. Total monthly production for "Customer Service" in CAW's Laguna Seca Subarea systems was calculated by multiplying total annual production (48 AF) times the average percentage of annual production October, November, and December (9.5%, 7.3%, and 5.7%, respectively). The annual production total was based on the assumption that production from the Laguna Seca Subarea of the Seaside Groundwater Basin would not exceed 48 AF. The average production percentages were based on monthly data for customer service from WY 2006 to 2013. The 48 AF annual production limit is specified in the Seaside Basin Adjudication Decision and is subject to change.
3. It should be noted that, based on recent historical use, actual monthly use will likely exceed the proposed monthly production target. In this context, the production targets represent the maximum monthly production that should occur so that CAW remains within its Standard Production Allocation for the Laguna Seca Subarea specified in the Seaside Decision. Accordingly, actual production beyond these production targets will be subject to replenishment assessment by the Seaside Watermaster.
4. "Other" production sources refer to supplies transferred to Laguna Seca Subarea customers from CAW's Carmel River sources or water rights acquired from other producers in the Seaside Basin to produce additional water. For example, under emergency conditions, water can be transferred from sources that serve customers in CAW's main system, via an existing interconnection, to customers in CAW's Ryan Ranch system.
