

**EXHIBIT 38-A**

**Monterey Peninsula Water Management District  
Water Supply Status  
June 1, 2023**

<b>Factor</b>	<b>Oct – May 2023</b>	<b>Average To Date</b>	<b>Percent of Average</b>	<b>Oct – May 2022</b>
<b>Rainfall (Inches)</b>	35.02	20.88	168%	12.82
<b>Runoff (Acre-Feet)</b>	204,132	66,371	308%	22,295
<b>Storage<sup>5</sup> (Acre-Feet)</b>	31,750	30,720	103%	27,890

**Notes:**

1. Rainfall and runoff estimates are based on measurements at San Clemente Dam. Annual rainfall and runoff at Sleepy Hollow Weir average 21.22 inches and 67,246 acre-feet, respectively. Annual values are based on the water year that runs from October 1 to September 30 of the following calendar year. The rainfall and runoff averages at the Sleepy Hollow Weir site are based on records for the 1922-2022 and 1902-2022 periods respectively.
2. The rainfall and runoff totals are based on measurements through the dates referenced in the table.
3. Storage estimates refer to usable storage in the Monterey Peninsula Water Resources System (MPWRS) that includes surface water in Los Padres and San Clemente Reservoirs and ground water in the Carmel Valley Alluvial Aquifer and in the Coastal Subareas of the Seaside Groundwater Basin. The storage averages are end-of-month values and are based on records for the 1989-2022 period. The storage estimates are end-of-month values for the dates referenced in the table.
4. The maximum storage capacity for the MPWRS is currently 33,130 acre-feet.
